

**FOR: Cre8txt Limited**

**For Immediate Release**

**Cre8txt Limited Licenses Prediction Engine from WordLogic Corporation**

*Mobile phone-style keypad to input text into a computer with predictive text technology*

**Bolton United Kingdom, 15<sup>th</sup> March 2007 – Cre8txt Ltd a UK company has licensed from WordLogic Corporation Vancouver their predictive text engine for the new Cre8txt handheld text entry device launching in a few months time.**

The Cre8txt keyboard utilises the skills of people who already use SMS (Short Message Service) texting on mobile phones. Texting has become massively popular with today's youth, particularly in Europe, where SMS has been ahead of North America and Asia. Worldwide, young people have developed a language based on SMS text and some can actually type text faster using a numerical keyboard layout rather than using a traditional computer QWERTY keyboard.

The Cre8txt keyboard is similar to a mobile phone keypad, and will utilise the WordLogic™ predictive text technology. The WordLogic Prediction Engine will predict text selected from a database of frequently used words, and will also be capable of translating SMS Text language into full text.

"It is true to say that texting is an established method of communicating but only on the message or messaging platform of the mobile phone," commented Russell Prue, Cre8txt's Director and joint inventor of the Cre8txt device. "Schools have stopped teaching keyboard skills mainly because of the pressures of the broader curriculum. Young people have continued to develop their mobile phone texting skills as this is often the preferred method of communication."

The Patent Pending Cre8txt is compatible with both PC and Apple Computer ® technologies and also the XBOX 360™ gaming platform

WordLogic Corporation (OTC:BB-WLGC), is a leading-edge developer and licensor of advanced multilingual predictive text input software. "We are truly excited to have Cre8txt Ltd endorse our world class technology as value added solutions to literacy issues in education," commented Frank Evanshen WordLogic's President and CEO. "The Cre8txt platform is a perfect fit for the WordLogic Predictive Keyboard."

**About WordLogic Corporation**

WordLogic Corporation is a technology company that delivers predictive interface solutions for computing devices ranging from small hand-held devices - such as PDAs - to laptops, Tablet PCs, and conventional desktop computers. Incorporated in the United States, the company's research, testing and marketing facilities are located in Canada.
